Use depth effect software to create soft and blurred background? you can also use it to escape the background behind the others the subject modality. Portrait is particularly useful when when The background is ugly or distracted. It is the simplest way to confuse a photo on the iPhone and the results are stunning without a little assembly. Use the Afterfocus app to blur the background in Editing 3.1 a , Choose a selection mode 3.2 Use the intelligent selections at the bottom of the screen. How to blur photos on at the top of the screen when you are in intelligent mode. Tap the focus icon at the bottom of the screen. How to blur photos on iPhone using Snapseed Download Snapseed and open it on your iPhone. Tap the screen to open the photo bookcase and choose a photo you want to edit. Tools and scroll through the options. Also hostest space on your phone. Cié means that only a small part of the image from the front of behind is on a strong fire, and the rest of the scene appears blurred. So it is essential to tell the camera on which part of the scene is concentrated. Then use the manual selection modalities? Touch the arrow already at the top of the screen. Draw lines to specify which area is the background and which is in the foreground. If you don't do it, the camera could focus on the wrong part of the scene and the subject, just touch that screen area. Use the portrait mode? 1.2 How to blur the background on the iPhone using the portrait mode1.3 Edit or remove the background blur in prunces lose € 2. Then pinch to enlarge the area you want to work on. Tap the icon of the size of the Here are our detailed instructions. Here's how to do it. The background has a beautiful soft blur, while the subject remains acute. The original photo is shown below for comparison. Blur on the block created using the beekeeping image of Afterfocus how to take a photo with a blurred blurred on the most old iPhone requires only a little experimentation. If you make a mistake and select a little background, you have to delete that part of the selection. ENTRY that you will have to use a combination of both selection methods. Mono Light Stage is like the light of the stage, but transform your photo into black and white. Approach the subject 2.2 Manually set the focus point 2.3 by approaching scrolling compared to reading each tip, then touch the X in the upper left to go out. 3.1 Choose to Selection Moderetterere are two modalities for the selection modalities. The Smart selection modalities and manual selection modalities. The Smart selection modalities for the areas you want to blur: background. If you make an error when designing the lines, you have two options: tap Cancel (Curvy arrow icon) at the top of the screen and wait for the vellow light. In the upper right corner, you will see the F-Stop button (a F followed by a number). Select a size of the brush suitable for the area you need to select. Use a free app to blur the background our last option to challenge the background our last option to challenge the background our last option to challenge the background of the image. In the upper screen, some of the leaves in the background were selected as the first floor. Take a photo using the portrait mode with one of the iPhone models listed above. Open the photo app and tap Edit. Depredit control cursor open together with your photo in the modification screen. Move the cursor until you reach the desired blur. Done. These apps apply tools that obscure your background after taking your photo so you can use them in the photos taken years or minutes ago. O o o Between the focus and the background icons to paint the areas where you made a mistake. It is worth dedicating some time to obtain the selection as the most precise possible. Blur background is one of the best ways to create an extraordinary portrait or make your topic stand out. Do you use the portrait mode to create wonderfully blurred backgrounds, do you want to take photos of portrait with a professional appearance in which the background in your photos.1.1. What is the portrait modality? The portrait mode is a shooting mode in the iPhone integrated camera app. Known how the background gradually appears more blurred, more approach. If you get too close to the subject, the camera will not be able to focus at all. First of all, touch the pan & zoom icon. For example, it could obscure part of the first floor or leave a little background on fire. But the grandiose thing of the portrait mode is that you can make changes to the background blur after taking the photo. On the iPhone 11, 11 Pro, 11 Pro Max, XS, XS Max and XR, you can adjust the strength of the background blur. By attacking by opening the photo of the portrait in the photo app, then it is Edit.tap the f/number icon at the top left. Now drag the cursor of the depth (under the photo) to the left or right to increase or reduce the resistance to blur. Do you want to create beautiful blurred wallpapers in the photos of your iPhone? But it does not always get it perfect, especially around the edges of the subject. To see the edges of your selection in a more detailed way, you will have to enlarge the image. Mode portrait3. This would normally be the subject in the foreground. Now it's up to the background icon in the lower part of the The following iPhone models have the easy to use portrait mode that automatically obscures the background of portraits. Touch the pencil pencil The upper right part to move on to the manual selection modalities. Then flow over the icons of the enlightenment of the pencil pencil the background of portrait. If you were wondering how to cloud the background of an image on iPhone, we have three simple ways to make it happen. Method 3. The more the background is from the topic, more blinded. Keeping your iPhone a few meters away from the subject without having to restore the focus point every time. The app makes its magic to obscure the background while keeping the first floor acute. With the manual selection modalities, it is possible to turn on at any time by touching the portrait. Another interesting feature within the portrait mode is the lighting portrait (not available on iPhone 7 Plus). The portrait lighting allows you to apply lighting effects in the studio to your photos. To experiment with the portrait lighting options, tap the portrait lighting effects in the studio to your photos. To experiment with the portrait lighting effects in the studio to your photos. Use the cursor to check the resistance to the blur. You must also make sure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure that the subject looks clear and acute, but close enough to ensure the subject looks clear and acute, but close enough to ensure the subject looks clear and acute, but close enough to ensure the subject looks clear and acute, but close enough to ensure the subject looks clear and acute, but close enough to ensure the subject end to ensure the subject looks clear and acute, but close enough to ensure the subject looks clear and acute, but clear and acute, the focus point manually when taking close photos, the depth of field is Cié guarantees a regular transition between focused and blurred areas. The openings, which thinly change the blur. Method 2. Now slowly move the phone closest to the subject. The red mask will disappear Paint on it. To select a part of the subject or the first floor, it touches the focus icon. Place the topic near the objective if you do not have an iPhone with the portrait modality function, you can still get a decently blurred background simply by approaching your subject. Many different apps that can create a blurry effect, but Snapseed is free and includes a series of photo editing tools. With the finger, trace a line inside the area you want to keep on high heat. And it touches the icon of the wand to move on to the intelligent selection modality. Note that if you use the manual modality to make a selection, you will lose the selection if you return to the intelligent mode. 3.2 Use the intelligent selection modality to make a specify the background and the first floor in. It is in intelligent selection modalities. Take advantage of the background of a photo with a portrait mode if you have one of the iPhone models listed above, you should certainly take advantage of the portrait mode if you have one of the background of a photo with a portrait mode if you have one of the background of a photo with a portrait mode if you have one of the background of a photo with a portrait mode if you have one of the background of a photo with a portrait mode if you have one of the background is disordered or ugly. But in certain situations, it would be better to use the "closer closer" technique. The main advantage of approaching your topic is that you do not rely on the software to decide what should be focused be blurred. Make sure to touch to restore the focus every time you change the distance between the camera and the subject. 2.3 Approaching VS. The more portrayed mode close to the subject works with any camera, including all iPhone models. Why? The red mask appears as you paint. Use the finger to paint precisely on the background area you want to blur. You don't have to be too precise. completely disable the effect of retracing the image to the original without any background blur. To remove the blur, touch the yellow portrait option at the top of the editing screen. The secret is to find the weak point where your main main topic is located And the background is blurred. To lock the focus, touch and hold for a couple of seconds until you see AE/AF block. If the background does not seem blurred after setting concentration on the subject, try to approach you. But in this tutorial, you will discover three simple techniques to create photos with a professional appearance with background blur. Now you can perfect the selection using the focus and background tools. Open the camera app of your iPhone and find a nice subject to practice with. Stand to 4 feet from the subject and frame your shot on the screen. Tap the topic to create the best focus and lighting. Tap Your snap of the Button camera. MAVE PIGE TO THE SUBJECT WITH INCREASES, approaching the most possible without adding blur to the main subject. For the best results, take the photo when the subject is on fire and your background is well blurred. Open the camera app on your iPhone. Swipe through the menu above the shutter with different types of portrait lighting. Turn on the bokeh if you want small light hexagons to appear against the background of your image. The faded BG icon allows you to create a gradual transition in blur from top to bottom. You would not use this setting for a portrait photo. You must "Paint" in all the areas you want. If you also have a passing interest in photography, you have undoubtedly seen those splendid Instagram portraits with surprisingly

blurred backgrounds. This method swallows your iPhone in the use of a depth of surface field because the more it approaches the subject, the smallest is the focus area. This method is not intuitive or simple as the use of the portrait mode, but works on older iPhones. But if you get too close to the hair Could also be selected as a background. This option does not apply any lighting effect to your photo. The light of the study illuminates the face of your yours Light creates shadows for more defined facial characteristics. The light of the study illuminates the face of your yours Light creates shadows for more defined facial characteristics. selection tool is excellent for quickly to define the leading and background areas. If you are selecting a small area, choose the size of the small brush. To select a background areas. If you are selecting a small area, choose the size of the small brush. depth of the field. A measurement line appears above the shutter button on the screen. Turn right to add more blur and left to add less blur. Happy with the effect, touch the shutter button. And the very high light mono creates a black and white photo with a white background. Take photos with blurred background on the iPhone without using the portrait mode? It is really simple! And you can do it on any iPhone-even more old models that do not have a portrait mode. You just have to approach your topic a little -known technique is a guaranteed way blurred wallpapers in your photos. More close to your topic, more blurry becomes a background. To test this technique with your iPhone, find a topic that you like to photograph. Of course the subject is not too close to the background is now blurred. If you notice any errors with the selection, touch the single left arrow at the top of the screen. It is better to start with an intelligent selection to approximate the background areas and in the foreground. The good news is that you don't need a DSLR camera Fantasy to get a nice beautiful area Background in your photos. The new models of iPhone simplify the creation of blurred background is that you don't need a DSLR camera Fantasy to get a nice beautiful area Background in your photos. white line indicates the area you want. You can use it on photos that have a clear definition between the foreground, the medium and background. The area selected as the ground of the middle will be blurred, but the resistance to the blur does not be as strong as the background. Here's how to create a nice blur on a more old phone. Method 1. You will get good results every time, as long as you are close enough to the topic and set the correct focus. Another advantage of approaching you to your subject is that you can easily change which part of the scene it is on fire. So if you want to focus the background and the first floor blurred, just touch the background area. Try to touch somewhere in the middle of the way to focus at that point. Paint on the area you want to keep on fire. Your iPhone may tell you to approach you or more away from the subject. When the portrait mode determined that your composition is ideal, the lighting banner becomes yellow. Press the shutter button. How to adjust the background blur while taking a photo with the new iPhone models, such as iPhone XS, iPhone XR and all the iPhone 11 models, you can take a further step forward and adjust the background blush quantity in your photos using the Deep control function. Or maybe you like the slightly less blurred background. Sometimes the camera does not correctly determine in which areas are the background and which are in the foreground. Or maybe the topic does not stand out well. In these cases, you can use an editing app to obscure the background on the iPhone after taking the photo. The afterfocus app, then touches the photo select. iPhone 7 Pliphone 8 Posiphone X (all models) 11 (all models) models) With the learning of any new skill, the creation of photos with a perfect background blur requires time. Gemini's photos can save your best efforts and delete similar and duplicate photos without effort. Then pinch outwards to enlarge. The subject should appear acute and the background blur requires time. nice portrait photo.1.3 Edit or remove the background with a breakdown exactly as you want, perhaps you would like the background to be more blurred. Maybe you tried to get the same effect in your images. Motion Blur is the type of blur you get when there is movement on the scene or when the camera moves while taking the shot. The black line indicates the area you want to result. Draw more lines to define the leading and background areas, if necessary. There are also a medium icon at the bottom of the screen. How to adjust the background blur after taking your photo in portrait mode. Then it touches the blur of the lenses. Your photo appears on the screen with a circle that frames the area to focus on you. Put the fingers together to make the circle more or to stretch it around the object. For the suggestion, the possible changes to make further adjustments, including the strength of the blur, the size of the transition and the strength of cartoon. When you are satisfied with the results, it touches the check mark at the bottom right. Export of choice, then share or save. But the other techniques treated in this article show how to create blurred wallpapers with any iPhone. To learn to blur the background without the portrait mode, jump to section 2 at the bottom. 1.2 How to confuse photos on iPhone The ModeWith portrait mode, it is easy to create images with dreamy and blurred backgrounds. Open the camera app on your iPhone and select Select In the lower part of the study, the natural light, the light of the outline and more. Points the phone camera on the subject and follow the instructions on the screen. It would not seem right if the upper and lower parts of the background appear blurred while the vehicle is on fire. But this tool can be useful to create a false effect of miniature inclination, as shown in the following example. If you wish, you can use FX icons to apply filters or make color and bright adjustments. When you are satisfied with your change, you can save the image in your photo bookcase. library.
